2023/24 CATALOGUE

Brand expertise and excellent design.

It is our vision - and has been for over 145 years - to make kitchens with style possible. We revolutionized the kitchen living space for our customers when Friedrich Küppersbusch introduced the first oven to the market. Every further development always offers new possibilities - more freedom, beauty, functionality, and efficiency - that make the kitchen the stylish centerpiece in every household: a place for individual moments. To make this very vision a reality, we have expanded our design lines.

In addition to our unique GraphiteLine Design now comes our MattBlack Design Line. Minimalist, high-quality, timeless. The MattBlack series impresses with a design that has been reduced to the essentials, which optimally accentuates every kitchen. Well thought-out down to the last detail and equipped with innovative technologies such as our ökotherm® oven catalyst, for cooking experiences at the highest level.

Küppersbusch stands for high-quality built-in kitchen appliances with a design claim. No matter which product you choose, they all have the unmistakable Küppersbusch advantages in common. Our products convince with their perfectly formed design, absolutely intuitive operation, and individual accents.

| Excellent QUALITY

For more than 145 years, our products have been defined by tangible quality. To us, this means top-quality materials, supreme workmanship and longevity.

With this approach to quality, we have time and again developed kitchen appliances that set new standards in terms of their design, performance and function. Thanks to our quality management system in accordance with DIN ISO 9001, we can structure all our processes in such a way as to give our customers end-to-end quality assurance.

High-quality workmanship: Our all-glass interior door with quadruple glazing is glued absolutely tightly to the stainless steel frame underneath. The materials used guarantee a long service life. The quadruple glazing also ensures very good insulation and thus low energy consumption. Of course, our handles are made of high-quality stainless steel.

Quality you can experience : Inside our ovens is the unique ökotherm[®] oven catalyst integrated into the rear wall.

Tested quality: The components used under the glass ceramic of our hobs are not only quality-tested, but also technically mature. This means that a wide range of functions can be set in a simple and, above all, easy-to-use way.

Inner qualities: The internal components of our downdraft are also impressive. The high-quality stainless steel box inside the extractor and the stainless steel grease filters used guarantee a long service life.

Top functions for an appetising, healthy and modern diet.

Individual

The Küppersbusch Individual concept offers the option of having all your appliances adapted to suit your personal taste. Depending on the model, there is a choice of white or black as a basic appliance colour. The fully individual look is achieved with one of the six different design kits.

multitherm plus hot-air convection system

A ring heating element located in the back wall of the oven surrounds the fan and enables baking to be done on several levels without any of the food in the oven being tainted with the flavour or the aroma of other food.

ökotherm® oven catalytic converter

Baking and roasting produces grease, cooking odours and suspended matter which all soil the interior of the oven and leave behind ugly traces of grease. The oven fan forces air polluted with grease, odours and suspended matter through the catalytic converter. On doing so all of the undesirable substances are completely converted into water and carbon dioxide. This keeps the oven much cleaner and only clean air escapes from the oven.

Pyrolytic cleaning

Thanks to our pyrolysis technology, arduous manual cleaning of the oven has finally become a thing of the past. While you enjoy your meal, the oven takes care of any greasy spatters inside the oven all by itself. By heating the oven to 500°C, the self-cleaning system reduces all food residues to a fine ash. You can choose between 3 pyrolysis programmes - depending on the degree of dirt. Afterwards, all you need to do is wipe away the ash with a damp cloth, and the oven looks brand new again.

ökoClean

Our perfect cleaning system uses minimal energy and no chemical detergents. Simply place a glass of water in the oven and choose the ökoClean function.

Oven functions

With this number of oven functions, you are sure to find the right one for every taste and every dish.

Automatic programmes

With the huge range of automatic programmes, perfect results are guaranteed. Choose between pastries, fish, meat, vegetables and desserts, enter the weight and select the desired level of doneness. The oven will now select a suitable baking mode and time. Press "Start", and the oven will tell you, when you can serve your meal.

Recipes

A number of complete recipes including ingredients list and method are already integrated in your oven. Simply select the number of people you are cooking for and enjoy.

Favorite programmes

You can save the function settings for your preferred dishes in your favorite programmes. Just like you can save your favorite recipes in your favorites folder - including all the corresponding settings, of course! That way, whenever you choose to make a dish from your digital cookbook, you can be sure it will be perfect.

K-Connect

With K-Connect from Küppersbusch, you can connect via the Küppersbusch app on your phone to the devices equipped with WI-FI. in the app, various things can be set, regulated or switched without even touching the device, simply by operating via the mobile phone.

Soft Open & Close

Gentle and whisper-quiet opening and closing of your appliance door - thanks to the Soft Open & Soft Close technology.

Touch to open тоисн

Küppersbusch is following the trend and adapting it to built-in appliances with doors which open automatically with a light touch on the front.

Roasting thermometer

F

The cooking status, particularly for large pieces of food, is not always easy to judge from the outside. Chefs de cuisine and hobby cooks therefore use a roasting thermometer which gives reliable information on the core temperature and hence on the cooking status of a roast. This means that you can roast any way you want it - rare, medium or well done - at exactly the right temperature.

TFT touch

Control your oven like a smart phone. Simply use the intuitive touch screen menu by tapping and swiping.

Touch control

The touch of a fingertip is sufficient and the functions of the sensor buttons will be activated.

Turn control knobs

If you prefer conventional operation, this product is the right choice. The operation is performed with the help of turn control knobs.

Child safety lock

It is not possible to unintentionally switch on the oven when the child safety lock is activated.

LED lighting

LED

These appliances are featured with modern, very economical LED lighting.

Bright Light

BRIGHT **LIGHT** The dishwashers are fitted with economical LED interior lighting, which is activated at the top of the door frame when the door is opened, thus illuminating the interior of the dishwasher in a pleasant light.

Küppersbusch steam ovens / coffee machines can easily be integrated into any kitchen, as due to the fresh water tank no additional water supply is necessary.

Inverter technology

Inverter technology in microwave ovens keeps power constant, even at low wattage (Power). In this way, the energy is optimally used and guarantees even heating, ensuring sensitive food is heated without loss of quality.

Automatic defrost and weight function

The automatic defrost and weight function enables different kinds of food to be defrosted gently. Simply select the food category and enter the weight. Everything else will be taken care of by the automatic defrost system.

Electronic steam system

The steam is generated outside the oven in an external steam generator. This creates the right climate in a matter of seconds.

Multisteam

Experience the different possibilities of steam cooking. No matter whether you are choosing pure Steam cooking with 100% steam or combinations with steam and hot air, our models cover all functions. With the combination functions we distinguish between combined steam cooking (50% steam and 50% hot air) and vario-steam cooking (25% steam and 75% hot air).

Steam cooking 30 – 100° C

With steam cooking, temperatures of between 30° C and 100° C can be selected in order to prepare any kind of food in the gentlest, most tasty manner. Fish cooked at a temperature of approx. 70° C has a taste which you shouldn't miss! But Crème Caramel and other delicate dishes are also easy to cook thanks to the fact that the steam temperature is maintained at an absolutely constant level.

Sous-Vide

Cook like a pro: sous-vide cooking involves creating and holding a constant temperature exclusively with the power of steam. This allows you to prepare dishes especially gently or to reheat pre-cooked and vacuum-packed dishes. Ideal in combination with the Küppersbusch vacuum drawer. Energy efficiency classes:

Energy efficiency class

In EU countries, a common energy labelling system provides a guide to how efficiently built-in electric ovens operate.

Fan (fluid dynamic efficiency)

The fan efficiency is a measure of the amount of electrical energy used to transport outgoing air.

Lighting

In addition to energy consumption, the lighting efficiency also provides information on the durability of the light bulb.

Grease deposit level

The grease deposit level is the percentage of grease absorbed by the grease fi Iters of a cooker hood.

level.

Noise level

In accordance with EU standards, the noise level stated has been measured at the maximum basic

Suitable for the disabled

Thanks to a remote control, switching the cooker hoods on and operating them is simple for people with disabilities too.

Remote control

Controlling the cooker hood functions by means of remote control allows for more freedom of movement and easier accessibility.

VarioLine

The Küppersbusch VarioLine series harmoniously combines diverse different hob sizes with or without stainless steel frame design.

Induction

Many professional cooks swear by this form of cold energy. Induction can be used more precisely than any other kind of energy – it is extremely fast, can be controlled perfectly, saves energy and is almost safe. The secret of induction cooking: energy is only transmitted to where cookware with a ferrous base has been placed on a cooking zone. This generation of energy direct on the base of the pan ensures extremely short heating up times for food and low energy consumption. And since the cooking zone itself doesn't get hot, nothing can burn on.

Vario Induction

Pots of different sizes and particularly large roasters are no problem on Vario induction hobs. The cooking zones can be used as usual, and there is also the option of activating the two rectangular cooking zones together and combine them with a single control operation to a bridge function.

Bridging function (Flex induction)

Thanks to the bridge function, the size of the cooking zone can be adapted to the needs. The cooking

zones are used as usual for small and normal pots. In the case of larger pots or a roasting pan, the cooking zones one behind the other can be combined to form a large surface.

Power booster setting

Küppersbusch induction hobs enable the power level of certain cooking zones to be raised by switching on the power booster setting, which means that heat required is available much more quickly.

STOP-AND-GO-Button

A STOP-AND-GO button makes for extremely convenient safety. With this button you will not be unpleasantly surprised when you unexpectedly need to answer the doorbell or the telephone, all it takes is a light touch on the STOP-AND-GO button and all of the activated cooking zones will be cut off at the setting that has been made. After your return all you need to do is press the button again to restart the cooking process.

Pan and pan size detection

In the case of all induction cooking zones, in addition to the pan detection system there is also a system to detect the size of a pan. Sensors determine the size of the cookware so that when a pan is placed on a cooking zone the induction heating circuit reacts accordingly.

Chef function

The chef function sub-divides the hob into 3 sections (left, centre, right). Individual power settings can be made for each section, and food is cooked by moving cookware to the other sections on the hob and not by changing power settings.

Hob widths 60 cm

The diverse widths of the Küppersbusch hobs mean flexibility all the way.

DualWok

The DualWok function offers the option of adjusting the flame rings as required - either the inner ring separately or both rings together.

ExactFlame

The ExactFlame function allows the flame to be adjusted precisely and continuously.

One-hand electric spark ignition

When the control knob is pressed in and turned, the electric one-hand spark ignition automatically produces an ignition spark and the relevant cooking zone is ignited.

NoFrost technology

The NoFrost technology ensures the inside of your freezer will remain free from any build-up of ice. Frost has no chance of settling on the inner walls or on your food. The advantage is that you will never have to defrost your freezer and that it will always work as economically as possible.

ökoFresh+

In this cooling zone with a temperature of nearly 0°C food can be kept fresh for up to three times longer than in a normal fridge section.

FreshZone

The FreshZone area in the refrigerator compartment is slightly cooler than the normal refrigerator compartment. This keeps the food stored there fresh for longer.

MultiAirflow

The fridge is fitted with a function that causes food to cool down quickly and that ensures an even temperature throughout the inside of the fridge. Depending on the model, this function either cuts out automatically or at the push of a button. It is highly useful for restoring the temperature after the door has been opened or when the surrounding temperature is high. When this function is active, the temperature is practically the same throughout the entire fridge, meaning you can store your food on any shelf or in any drawer you please.

ChillerZone

In the ChillerZone, food can be kept fresh at a temperature close to 0°C for up to three times longer than in a normal refrigerator.

CrystalLight

This special interior lighting inhibits bacterial growth and reduces odours in the refrigerator compartment.

IonClean

IonClean ensures good odours inside the device. The integrated ioniser prevents odour-forming bacteria from settling.

Water safety system

Even if the system is switched off or in the event of a power failure, the water safety system protects the dishwasher reliably and safely against any damage caused by water.

aquasensor

The aquasensor makes sure that your dishwasher uses no more water than necessary. No more, and no less. A sensor checks the water for the tiniest particles of dirt. It tests the water at the end of the pre-rinse cycle to see if it can be reused for the main wash cycle. If the water is too dirty, fresh water is taken in. However, if the rinse water is clean enough, it will be reused and you will save on water.

Beam on floor

Fully integrated dishwashers do not inform you immediately on their operating status. With the "Beam on floor" signal - a red dot which is displayed on the floor - you will know immediately whether the rinsing cycle has been completed or not.

express system

Q Rinse and dry twice as fast with the express system. If this programme is selected, the rinsing time is reduced by up to 50%. An optimal rinsing result is quaranteed.

BEAM

Glass care system

Glasses can be adversely affected by the kind of water they come into contact with. The Küppersbusch glass care system not only adjusts the water hardness level, it also prevents thermal shock, which can occur if excessively hot water comes into contact with glass.

Tab detergent recognition

The automatic detergent recognition function adapts the washing cycles automatically to the type of detergent tablet being used, ensuring the best possible results.

Fixed furniture door system

In the case of the fixed furniture door system the hinges of the refrigerator doors are attached to the refrigerator and the back of the kitchen fur niture door.

Sliding-rail furniture door system

In the case of the sliding rail furniture door system the hinges of the furniture door are attached to the back of the latter and the inside of the furniture niche. A sliding rail on the front of the refrigerator attaches the door of the kitchen furniture to the refrigerator.

Quick installation

This refers to convenience when installing built-in products.

FlexHinge

No matter how your kitchen looks like: long or extra thick furniture fronts, low plinths. The corresponding furniture front is fixed to the FlexHinge, thereby pushing

the door up when opening and a bumping on the plinth is prevented.

Niche height

The niche height is the height of the required kitchen unit niche in cm.

Niche width

This symbol indicates the required niche or cut-out width.

Wall-hanging cabinet width

Wall-hanging cabinet width defines the wall-hanging cabinet required for installation in cm.

Appliance width 60

This symbol indicates the width of the appliance in cm.

Niche width

The niche width is the width of the required kitchen unit niche in cm.

Niche height 30.00

The niche height is the height of the required kitchen unit niche in cm.

Design line MattBlack

Black, matt surfaces have a tradition in the kitchen area and also outside it - in home decor, in the furniture or car industry. In line with current design trends, there is a revival of the matt surface in the kitchen, in true Küppersbusch style.

The Küppersbusch MattBlack series is a clear statement of taste and a return to our roots in the Ruhr region. Minimalist, high-quality, timeless.

This series, consisting of ovens, compact appliances, induction hob, induction hob with extraction, etc., impresses with a design that has been reduced to the essentials - and which shows off every kitchen to its best advantage. Well thought-out down to the last detail - and equipped with innovative technologies such as our ökotherm® oven catalyst for cooking experiences at the highest level.

MattBlack

Design line GraphiteLine

Deep down in the old coal mines of the Ruhr region in Germany, miners faced an extremely tough job, where there was no room for error. These men understood loyalty and honour in a unique way, and this spirit lives on in this region.

The new Graphite series pays tribute to these men and this way of life, combining the roots of the region where the Küppersbusch brand was founded with painstaking work to achieve a product that is one of a kind.

OVENS & COMPACT APPLIANCES

In 1875 we placed our first oven on the market, in these days the best one. Discover the new ovens and compact appliances by Küppersbusch. With plenty of innovative details that are sure to inspire your passion for cooking.

Küppersbusch

| Küppersbusch | NDIVIDUAL

Nobody is like you. Always stay true to yourself, even in your kitchen, and adapt your Küppersbusch appliances to your preferences with the Individual Concept.

Everyone likes different things. Different colours. Different fashions. Different music. The individuality, the uniqueness of personality is what makes every human being what he or she is. The Küppersbusch Individual Concept offers you the opportunity to adapt our appliances to your personal preferences. For example, you can choose your appliance fronts to be black or white. The design kits are available for ovens, compact appliances, induction hobs with integrated hood, cooker hoods and wine coolers.

Maximum variability, individual style.

Küppersbusch ÖKOTHERM®

The unique ökotherm[®] catalytic converter inside your oven ensures purity and cleanliness right from the outset! Baking and cooking fumes in your kitchen will be a thing of the past.

Energy-saving! The process releases energy – this is returned to into the oven and reused to bake and cook. That saves energy!

Tasty! Prepared food stay especially moist and the natural aroma is preserved.

Fresh air! The air in your kitchen will be palpably fresher and less contaminated with grease.

For inspiring cooking. Steam ovens.

Realise your highest culinary visions quite simply with the gentle and flavour-intensive preparation in the steam ovens from Küppersbusch.

With the Küppersbusch ovens with steam function, you can choose to do pure steam cooking with 100% steam or use a combination of steam and hot air. So you can select the perfect setting for every dish you cook.

In addition, inspire your guests with high-cuisine methods such as **sous-vide cooking**.

Scan the QR code and find out.

ökotherm[®] and AirFry – the perfect combination

Healthy frying with the AirFry tray.

Whether French fries, chicken wings or vegetable sticks - the result is convincing. The ingredients are placed directly on the AirFry tray, drizzled with a few drops of oil, seasoned and placed in the oven.

This way you get perfect cooking results without an additional appliance in the kitchen. This is not only frying without the smell of grease, but also saves space.

A piece of Italy for your home.

In the new ovens with professional pizza function, you can make a real Pizza Napoletana just like in a stone oven. Crispy and delicious in just 3 minutes* thanks to the perfect 340° C temperature.

In addition to the professional pizza function, Küppersbusch offers other highlights:

A pizza stone, a professional pizza lifter and a telescopic pullout are standard features.

The other 7 baking or special baking functions offer the perfect solution for every taste.

And the pyrolysis self-cleaning or the gentle ökoClean function also takes care of cleaning.

* Previous preheating required.

OVENS. STEAMER. K-SERIES.3

MattBlack, including steel handle

BD 6340.0 MattBlack NEW

- 8 oven functions
- 4 steam functions
- External steam generator
- Oven control with high-quality aluminum control knobs
- Electronic clock (cooking time, end of cooking time, minute minder) with white display
- Removable full glass inner door with a stainless steel frame, quadruple glazed
- Rapid heating
- Oven lighting
- 70 litres XXL capacity

Technical data:

- Electrical connection 3.6 kW ready to plug in (Schuko-plug)

Standard accessories:

 1 enamel baking tray; 1 roasting grid, 1 perforated cooking tray, 1 non-perforated cooking tray, 1 telescopic glide-out shelve (standard glide-out ZB 1003)

Steam cooking with 100% steam:

With steam temperatures between 30°C and 100°C this function is ideal for fish, vegetables, fruit, rice, potatoes or dumplings. Fish cooked at a temperature of approx. 70°C is a gourmet experience you should not miss out! But also crème caramel and other delicate dishes are easy perfectly to prepare thanks to the exact and stable steam temperature.

Cook at home like the professionals: The steam cooking function is also ideal for preparing dishes using the particularly gentle sous vide method.

Combined steam cooking:

By mixing 50% steam with 50% hot air, you get the perfect cooking performance for preparing custard royale, flans, puddings, juicy casseroles and for regenerating foods.

Regenerating:

Dishes which have been prepared in advance can be heated up with a special combination of steam and hot air. There is no loss of quality or moisture and the food can be served as if freshly cooked at the exact time required.

Fresh water tank:

Küppersbusch steam ovens can easily be integrated into any kitchen, as due to the fresh water tank no additional water supply is necessary. In addition, refilling during cooking is no problem.

| Individual and versatile.

HOBS & DOWNDRAFT

Hobs that inspire: from cutting-edge induction to gas hobs. We offer something for different style and design, tailored to your personal needs.

| One divice TWO USES

Küppersbusch induction hob-level extractor units are both cooking zone and extractor in one! This is an especially effective way of hob ventilation, as grease and steam are extracted directly at the source and are not carried through the room. The perfect solution for open living kitchens and island kitchens.

Another bonus is that you don't need a separate extractor fan above your cooktop, meaning you have more freedom when designing your kitchen. You can even install your cooktop below a window.

When using the hob-level extractor, you will need to insert the ventilation grid (provided). When you have finished using the extractor, you can close it again with its glass insert.

In addition to the 90 and 80 cm long induction hob-level extractors, Küppersbusch also provides the perfect solution for VarioLine:

The VKM 1820.0 worktop extraction, which is only 14 cm wide, is offered as a module for combining with VarioLine hobs.

VKIW 3800.0 + VKM 1820.0 + VKI 3550.0

Ventilation grids in the individual concept.

Design Silver Chrome

	1	1
-		3

Design Copper

Ventilation grid in the individual concept. Individualise your induction hob-level extractor. Fitting to the ovens, compact appliances, hoods, etc., designs in Stainless Steel, Black Chrome, Silver Chrome, Gold, and Copper are also possible as special orders (delivery time on request).

The grids are not suitable for dishwashers.

Almost as hard as a **DIAMOND**

The surfaces of many Küppersbusch hobs and hobs with extraction are finished with the SCHOTT CERAN® Miradur® coating.

Miradur[®] withstands the mechanical and thermal stresses of everyday cooking - and keeps almost scratches away. 95 % fewer scratches from sand, for example, which gets onto the cooking surface when washing lettuce and would then normally leave permanent marks when moving a pot. 70 % fewer scratches from abrasive sponges.

A perfect hob must not only be functional, it must also be pleasing to the eye for a long time. And this is what the almost diamond-hard surface finish does brilliantly: the fascinating design sets a clear accent and attracts all eyes as the visual centre of the kitchen. Miradur® is characterised by a slightly metallic look and a futuristic touch. A hob that speaks its own design language - and meets the highest aesthetic demands.

Küppersbusch VarioLine: This is like having a building set of different hob types, which also allows you to combine various widths with one another. and put them together to form a harmonious whole. This is how you create your personal culinary creative space.

How wide can and should your hob be?

Do you have any constraints regarding space in your kitchen? Or are you free to choose your dream size? With hob widths of 80 cm, 60 cm, 38 cm and 30 cm, Küppersbusch gives you the flexibility you need – also for combining elements, as shown in the VarioLine example above.

DESIGN AND FUNCTION

Hobs don't have to be black! At Küppersbusch, you are spoilt for choice: In addition to classic black hobs you can also get pure white hobs as well hobs with Miradur® surface in Chrome-Look. Another question you will need to ask yourself is: what should the frame look like?

Stainless steel frame

Two elegant stainless steel brackets frame the hob from the front and back. With this type of frame, you can use the VarioLine connector bracket to combine several hob elements.

Flush installation

The frameless hob is traditionally top- mount installed or can be flush-mounted into your worktop, giving you a completely level surface. A great advantage here: the hob is incredibly easy to clean.

Automatic COOKING FUNCTIONS

Automatic cooking functions simplify cooking and are included in many Küppersbusch hobs.

With the help of the special levels, preset temperatures are automatically reached and maintained or, if necessary, automatically switched down to the appropriate boiling level. This prevents liquids from boiling over or burning something in the pot.

Melting

Melting chocolate without a water bath - this works with the melting. Simply put the chocolate in a pot, place it on the hob and select the melting. The chocolate melts without burning.

Keeping warm

The food is ready, but the guests are a little late. That's no problem with the keep-warm level. Food that has already been cooked can be kept warm directly on the hob with the keep-warm level.

Pasta cooking

The pasta cooking makes pasta cooking even more convenient. Once selected, the hob switches directly back to the correct cooking level after boiling.

Quick boilingl

The quick boiling level helps you when rice cooking, for example. When the pot is placed on the hob, a signal sounds shortly before the water starts to boil. After a short time, another signal indicates that the hob automatically switches back to a lower power level for further cooking.

Rice cooking

Cooking rice has never been so easy! Pour water and rice into a pot, select the rice cooking function and the hob does the rest.

Frying

Which setting is the right to obtain the optimum roasting temperature is decided by the hob. After preheating the cookware, an acoustic signal indicates when the food should be placed on the cookware. The automatic power control keeps the temperature on the cookware constant.

Roasting

Which setting is the right to obtain the optimum roasting temperature is decided by the hob. After preheating the cookware, an acoustic signal indicates when the food should be placed on the cookware. The automatic power control keeps the temperature on the cookware constant.

Grilling

It is very easy to prepare a juicy piece of meat using the grill level. You can place the meat in the pan, after the pan has been heated up on the hob with the grill level selected, The hob automatically controls the temperature required for an optimal roasting result.

Poaching

Poaching on the hob is very easy with this cooking function. This gentle preparation, in which the water is heated but does not boil, is particularly suitable for fine fish fillets or eqg custard.

Confit

Would you like to preserve meat, fish or vegetables in a delicious way? Select the confit stage and cook your food slowly at low temperatures.

Grilling

KMI 9800.0 SR-Miradur black, frameless

Induction hob:

Intuitive operation: Everything is easily under control. With the Slidercontrol glideControl+, you set the desired power level by simply touching and sliding.

More space for enjoyment: The 2 large flex zones offer you even more space for your cooking creations. You have the option of cooking with the pot of your choice, regardless of its size or shape.

Direct functions: Automatic cooking functions such as melting, keeping warm, pasta cooking, confit, frying, roasting, grilling, controlled by temperature sensors, guarantee perfect results every time.

Hood:

Automatic functions: The extractor bonnet switches on automatically as soon as the hob is put into operation. The extraction power is directly adapted to the power level of the hob and the number of active cooking zones. The Auto-Fresh-Function keeps your fresh and odour-free.

Easy cleaning: Both the collection container and the moisture sponge can be easily accessed without tools and cleaned in the dishwasher at 60°C.

Durable, powerful and quiet: The so-called "brushless" motor works with extremely low wear, efficiently (energy class A+) and particularly quietly (under 66 dB (A)).

For individual cooking enjoyment

Cooking has seldom been as enjoyable and as practical as it is today with our unique honeycomb hobs. An exceptional design and a high degree of flexibility mean the greatest possible individuality. Ideal hob design, optimal space utilisation and quick, easy cleaning are all combined. You have plenty of personal freedom when it comes to arranging the individual honeycombs. Simply put them together according to your own personal wishes.

Induction & Gashobs

Experience the many possibilities of cooking with gas and induction at the same time, helping every discerning cook to embark on an individual culinary voyage of discovery.

Mix cooktops that feature powerful gas burners and the precise control of induction.

These unique cooktops range in size from 60 cm to 90 cm, can be flush or surface mounted.

Each of these hobs has been designed for exceptional performance at a professional level.

New gas hobs

An eye-catcher for unique culinary worlds: The new gas hobs.

The creative process of cooking demands cooking methods that enable every amateur chef to devote himself to his passion. Küppersbusch will inspire him with the new gas hobs.

The new gas hobs have exceptional performance and controls that feel premium because they are. This is a successful masterpiece of technology: with brass burners, they make cooking uncomplicated, versatile and extremely precise. The unique 8 kW double wok burners open up the next dimension of cooking, especially for all wok lovers.

Individual and efficient. KÜPPERSBUSCH COOKER HOODS

Goodbye cooking odours! Our cooker hoods provide you with a pleasant cooking atmosphere, avoiding greasy soiling and moisture damage. And they look really good.

Hob and extractor hood in one: the hob-level extractor

The **induction hob-level extractor** units are both cooking zone and extractor fan in one! As grease and fumes are extracted directly at hob-level, they do not travel through the room, making for a significantly more pleasant climate in your kitchen. The perfect solution for open living kitchens.

Another bonus is that you don't need a separate extractor fan above your cooker, meaning you have more freedom when designing your kitchen. The installation is not only more flexible, but also simpler, because you only need to mount one appliance.

The ventilation system can be discretely hidden inside the base of your unit. This has the advantage that annoying operating sounds are reduced to a minimum.

For more information on Küppersbusch hob-level extractor units, please refer to the chapter on hobs.

Scan the QR code and find out.

Impressively versatile

The perfect model for every kitchen: the Küppersbusch range offers a multitude of styles, designs and functions.

Küppersbusch can offer you the perfect cooker hood for every kitchen and every taste. Whether you have an open plan kitchen or a separate one. At Küppersbusch – with our wall, island, head space, ceiling and module cooker hoods – you are spoilt for choice.

Depending on the design of your kitchen at home, you can choose between an exhaust air and a recirculation model.

The **Küppersbusch Individual Concept** offers you the opportunity to adapt our appliances to your personal preferences. The cooker hoods are no exception: you can match them to the design kit you choose for your oven. Whichever model you go for, each one impresses with its quality design, both individually and in combination with other appliances.

Individual and cool. KÜPPERSBUSCH FRESH DEVICES

Our wide range of refrigerators blends harmoniously into any kitchen landscape, ensuring that a supply of the freshest ingredients is always on hand. All refrigerators and freezers, as well as the wine cabinets, impress with their outstanding performance, quality and temperature accuracy for professional cooling performance.

Innovative interior designs.

Top Interior Design: The interior design of Küppersbusch cooling appliances appears at its best: the drawers are made of high-grade plastic with chrome railings, combined with chrome trims. The safety- glass shelves in the inner compartment have a chrome trim at the front. In addition, the LED lighting provides outstanding energy-saving illumination (depending on model).

Space-saving bottle storage: Thanks to the chrome-plated bottle shelves, drinks bottles can be stored in the refrigerator to save space

Electronic temperature control: Thanks to electronic control, the selected temperature in the refrigerator or freezer is maintained exactly. The digital temperature display is clearly arranged and easy to operate.

BlueLight: To keep vegetables fresh for a long time, the blue Active Blue Light ensures that fruit and vegetables continue photosynthesis. This keeps tomatoes, for example, juicier and full of vitamins.

Individual and brilliant. KÜPPERSBUSCH DISHWASHERS

These dishwashers take as much care of glasses and cutlery as you do. They wash your precious dishes gently, quietly, and brilliantly. How about an additional optional cleaning zone for careful yet gentle cleaning of dishes and glasses? All possible with the numerous options.

SYSTEMATIC FLEXIBILITY

multiflex drawers

The multiflex drawers offer more convenience and flexibility. Cutlery, cooking utensils and espresso cups need no longer be placed in the main baskets thereby allowing more space for larger items.

multiflex drawer I (for dishwashers 60/45 cm) without adjustable elements

multiflex drawer II (for dishwashers 60 cm) adjustable cup trays

multiflex basket system III for dishwashers 60 cm

Top basket

- 6 collapsible plate racks
- 2 cup racks
- Basket handle with steel insert

Bottom basket

- 8 collapsible plate racks
- Basket handle with steel insert

multiflex basket system II for dishwashers 60 cm

Top basket

- 2 cup racks
- 3 collapsible plate racks

- Basket handle

- Bottom basket
- 4 collapsible plate racks
- Basket handle

PLASMAMADE INSTALLATION FOR DIFFERENT TYPES OF COOKER HOOD.

1. Island and chimney cooker hoods ZD 8000 filter is mounted direct on the air vent.

4. Built-in ceiling canopy hoods

ZD 8000 filter is mounted direct on the cooker hood motor.

2. Downdraft extractors ZD 8001 filter is mounted in the base.

5. Built-in cooker hoods with ZD 8001 ZD 8001 filter is put onto the unit and connected to the hood. **3. Hob with integrated cooktop exractor** ZD 8001 filter is mounted in the base.

6. Built-in cooker hoods with ZD 8000 ZD 8000 filter is put directly onto the motor of the hood.

INSTALLATION INSTRUCTIONS, DELIVERY PART.

KMI 8560.0 / KMI 8590.0

The All-in-one System with the motor integrated into the hob you can control the exhaust air below the hob in all directions. Upper elbow 90° is included in the standard delivery (s. Page 167, Fig. b).

The All-in-one System with the motor integrated into the hob you can control the exhaust air below the hob in all directions. Upper elbow 90° is included in the standard delivery.

INSTALLATION INSTRUCTIONS, DELIVERY PART.

KMI 9850.0 / KMI 9800.0 / KMI 8500.0 / VKM 1820.0

The exhaust air system can be integrated invisibly and space-savingly in the base area of the base cabinet. Depending on the model, the set contains flexible or rigid components and a powerful plinth fan. KMI 9850.0, KMI 9800.0 and VKM 1820.0 contain components as shown in Figures a, b, d, e and f, KMI 8500.0 contains a, b, c, d and e.

Installation schematic: exhoust duct

Installation variant: worktop deep 600 mm*

* only for model KMI 8500.0 with flexible air exhaust system (Fig. c)

# DIN ISO 9001 | 14001

#### With the quality management system in accordance with DIN ISO 9001, Küppersbusch guarantees to provide its customers with quality and aims to deliver added value.

With its structured and straightforward processes as well as clearly defined responsibilities, the individually tailored quality management system for a holistic management is an important aspect of the company and focuses on customer satisfaction. For us, this DIN standard is also the foundation for a company that strives to learn and continually improve. We believe that sustainable development forms a sound basis for increasing customer satisfaction and securing our own future.

#### Our contribution to environmental protection

With ISO 14001, Küppersbusch is committed to conserving natural resources in the best possible way. The certification for sustainable environmental management shows that we attach particular importance to the responsible use of natural resources.
